Geliş Tarihi : 23.01.2014 Kabul Tarihi : 21.06.2014

ABSTRACT: This study was carried out to survey wild flora (on herbaceous plants and some shrubs) around the town of Cirencester in the summer of 2013. The purpose of the study was to categorise wild species and provide a review of the most frequent plants available based on their role in the human environment. In the survey, 32 families, 96 genera and a total of 126 species were identified. According to number of genus, the top 5 families were Asteraceae 20 genus (21.5%), Poaceae 13 (14.0%), Fabaceae 8 (8.6%), Apiaceae, Lamiaceae, Polygonaceae and Rosaceae 4 (4.3%) and Brassicaceae and Plantaginaceae 3 (3.2%). According to number of species, top 5 families were Asteraceae 27 (21.4%), Poaceae 17 (13.5%), Fabaceae 12 (9.5%), Lamiaceae 7 (5.6%) and Polygonaceae 6 (4.8%). Genera were ranked according to number of species: *Circium* and *Trifolium* 4; *Sonchus*, *Lamium*, *Poa* and *Rumex* 3; *Chenopodium*, *Matricaria*, *Senecio*, *Sinapis*, *Vicia*, *Stachys*, *Malva*, *Fumaria*, *Plantago*, *Veronica*, *Alopecurus*, *Festuca*, *Lolium* and *Urtica* 2, and other genus have 1 species. Grouped according to their status 105 least concern plants, 9 rare and scarce plants, 4 vulnerable plants, 1 endemic plant and 1 near threatened plant were determined. According to life-style, the survey determined that among all of the identified taxa there were 66 perennial, 42 annual, 6 biennial, 5 annual-biennial, 5 biennial-perennial and 2 annual-biennial-perennial. Ranking species in terms of purpose and status identified 103 weeds, 64 medicinal plants, 55 poisonous plant, 28 invasive plants, 26 forage crops and 9 ornamental plants.

CIRENCESTER DOĞAL FLORASINDA BULUNAN BAZI YABANI BİTKİLER

ÖZET: Bu çalışma, 2013 yazında Cirencester kasabası doğal florasındaki otsu bitkiler ve bazı çalışmaları üzerinde gerçekleştirilmiştir. Çalışmanın amacı, doğal bitki türlerini sınıflayarak insan yaşamındaki rollerini belirlemektir. Araştırmada 32 familya, 96 cins olmak üzere 126 takson belirlenmiştir. Cins sayılarına göre ilk beş familya; Asteraceae 20 (%21.5), Poaceae 13 (%14.0), Fabaceae 8 (%8.6), Apiaceae, Lamiaceae, Polygonaceae ve Rosaceae 4 (%4.3), Brassicaceae ve Plantaginaceae 3 (%3.2)'dan oluşmuştur. Tür sayılarına göre ilk beş familya; Asteraceae 27 (%21.4), Poaceae 17 (%13.5), Fabaceae 12 (%9.5), Lamiaceae 7 (%5.6) ve Polygonaceae 6 (%4.8)'dan oluşmuştur. Cinsler tür sayısına göre sıralandığında; *Circium* ve *Trifolium* 4; *Sonchus*, *Lamium*, *Poa* ve *Rumex* 3; *Chenopodium*, *Matricaria*, *Senecio*, *Sinapis*, *Vicia*, *Stachys*, *Malva*, *Fumaria*, *Plantago*, *Veronica*, *Alopecurus*, *Festuca*, *Lolium* ve *Urtica* 2, diğer cinsler ise 1 tür sahiptir. Durumlarına göre sınıflandırıldığından; 105 adet en az endişe verici bitkiler, 9 nadir ve seyrek bitkiler, 4 zarar görebilir durumda bitkiler, 1 endemik ve 1 yakın tehdit altında bitki olarak belirlenmiştir. Araştırmada, yaşam formlarına göre incelenen taksonlar arasında 66 çok yıllık, 42 tek yıllık, 6 iki yıllık, 5 tek yıllık-iki yıllık ve 2 tek yıllık-iki yıllık-çok yıllık bitkiler olduğu saptanmıştır. Kullanım amacı ve durumlarına göre, 103 yabancı ot, 64 tıbbi bitki, 55 zehirli bitki, 28 istilacı bitki, 26 yem bitkisi ve 9 süs bitkisi türü belirlenmiştir.

Anahtar Sözcükler: Yabani bitkiler, doğal flora, Cirencester, İngiltere

1. INTRODUCTION

Biological diversity is one of the country's most important natural treasures and is of great importance thereof maintaining the transfer of the next generations. Nowadays 413 genera and 1955 species are reported to be in the UK as a plant (Maxted et al., 2007). Cheffings et al. (2005) emphasized numbers of taxa by The International Union for Conservation of Nature (IUCN), 9 Extinct, 4 Extinct in the Wild, 35 Critically Endangered, 90 Endangered, 220

Vulnerable, 39 Data Deficient, Near Threatened 98 and Least Concern 1261 as a total 1756 in Britain.

Quinn (2009) conducted study on herbaceous and shrubs in the South West region; identified 69 families, 263 genera and 756 species in Bristol. Families, according to percentage of species, determined such as Asteraceae (6.7%), Poaceae (6.2%), Brassicaceae (3.6%), Fabaceae (3.2%) and Rosaceae 22 (2.9%). Anonymous (2010) reported 15 families, 30 genera and 33 species in Cirencester, Rosaceae (21.2%), Poaceae (15.2%), Asteraceae

(12.1%), Fabaceae (9.1%) and Apiaceae, Lamiaceae and Rubiaceae (6.1%). Rutter (2011) stated 29 families, 80 genera and 110 species in Gloucestershire. Families, in terms of species, recognized such as Asteraceae and Poaceae (15.5%), Fabaceae and Plantaginaceae (6.4%), Araliaceae, Brassicaceae, Lamiaceae and Ranunculaceae (4.5%), Caryophyllaceae and Onagraceae (3.6%), Apiaceae, Polygonaceae and Violaceae (2.7%). Pilkington (2012) pointed 55 families, 174 genera and 267 species in Wiltshire, and Cyperaceae (8.6%), Asteraceae (7.1%), Fabaceae (6.4%), Orchidaceae and Poaceae (6.0%) and Caryophyllaceae (5.6%), respectively. Anonymous (2013 b) identified 55 families, 145 genera and 189 species in Gloucestershire. Families, according to rate of species, determined such as Poaceae (20.1%), Asteraceae (10.1%), Rosaceae 22 (6.3%), Fabaceae (5.3%), Lamiaceae and Cyperaceae (4.8%), respectively.

Furthermore, some species were found in our study such as *Achillea millefolium*, *Alopecurus myosuroides*, *Angelica sylvestris*, *Bellis perennis*, *Chenopodium album*, *Cirsium vulgare*, *Dactylis glomerata*, *Dipascus fullonum*, *Fallopia convolvulus*, *Festuca rubra*, *Galium aparine*, *Geranium robertianum*, *Hedera helix*, *Heracleum sphondylium*, *Holcus lanatus*, *Lamium purpureum*, *Lolium perenne*, *Malva sylvestris*, *Medicago lupulina*, *Myosotis arvensis*, *Onobrychis viciifolia*, *Papaver rhoeas*, *Plantago lanceolata*, *Poa annua*, *Poa trivialis*, *Polygonum aviculare*, *Ranunculus repens*, *Rosa canina*, *Rubus fruticosus agg.*, *Senecio vulgaris*, *Sinapis arvensis*, *Stellaria media*, *Trifolium pratense*, *Trifolium repens*, *Urtica dioica*, *Urtica urens*, *Veronica hederifolia* and *Veronica persica* identified at previous studies in Cirencester (Anonymous, 2010; Cosser, 1996; Sawyer, 2006).

The purpose of this review was to catalogue wild flora in the Cirencester, Gloucestershire, England, urban and periurban areas, to identify plant genetic resources and to support further studies such as agricultural, biological or more generally, environmental surveys.

2. MATERIAL AND METHODS

This flora survey was conducted in Cirencester, Gloucestershire, England, from mid-June until the end of August 2013. The climate of the site was warm and moderately dry (annual rainfall 823mm). The soil geology is of the Jurassic oolitic limestones of the Cotswold range. Soils vary in depth and texture over the limestone, they are typically prone to summer drought, but have high fertility (Anonymous, 2013).

The area covered by the survey included urban and peri-urban areas, with approximately distance between locations of 1 km. Geographical coordinates and elevation of each survey location were registered (Figure 1). Photographs were taken at different distances from each of the plants in a location. The

study of herbaceous plants and some shrubs are usually taken into account. Taxonomy of the plant species photographed was identified using the works of Sikula and Stolfa (1979), Hanf (1983), Stary and Berger, (1983), Cooper and Johnson (1984), Woodward (1985), Press et al. (1989), Fitter et al. (1974), Fitter et al. (1992), Donaldson and Bowers (1998), Bruneton (1999), Pryce (2002), Rose (2006), Sterry (2006), Clarke et al. (2007), Lym and Travnicek (2012), Bauder (2013), Flagstad and Burns (2013).

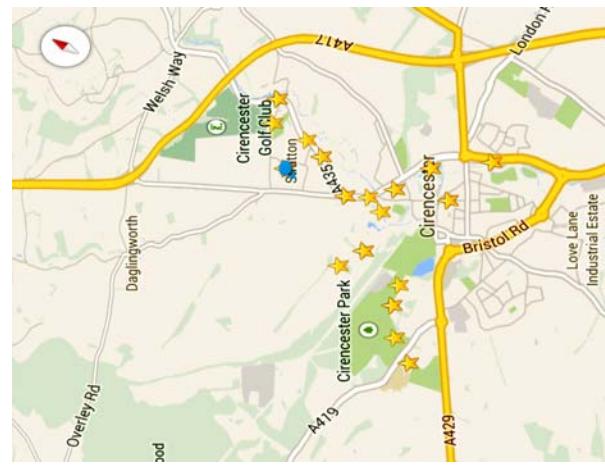

Figure 1. Locations of studied area in Cirencester.

Geographical positions and altitude of the studied locations; 51°42'37"N, 1°59'31"W (137 m); 51°42'47"N, 1°59'25"W (136 m); 51°43'15"N, 1°58'55"W (134 m); 51°43'20"N, 1°59'12"W (145 m); 51°43'25"N, 1°58'45"W (137 m); 51°43'42"N - 1°59'6"W (118 m), 51°44'14"N - 1°58'27"W (152 m), 51°44'18"N - 1°58'12"W (137 m), 51°43'54"N - 1°58'23"W (132 m), 51°43'33"N - 1°58'35"W (117 m), 51°43'25"N - 1°58'27"W (112 m), 51°43'18"N - 1°58'14"W (112 m), 51°43'11"N - 1°57'51"W (112 m), 51°42'53"N - 1°57'28"W (112 m) and 51°42'17"N - 1°54'6"W (105 m) shaped (Figure 1).

3. RESULTS AND DISCUSSION

The survey identified 32 families and 96 genus and total 126 taxa (Table 1). Families ranked according to number of genus included: It was determined that 20 genera of Asteraceae (21.5%), 13 genera of Poaceae (14.0%), 8 genera of Fabaceae (8.6%), 4 genera of Apiaceae, Lamiaceae, Polygonaceae and Rosaceae (4.3%), 3 genera of Brassicaceae and Plantaginaceae (3.2%), 2 genera of Boraginaceae, Caryophyllaceae, Convolvulaceae, Malvaceae, Papaveraceae, Ranunculaceae and Scrophulariaceae (2.2%), and 1 genus of Amaranthaceae, Araceae, Araliaceae, Cyperaceae, Dennstaedtiaceae, Dipsacaceae, Euphorbiaceae, Geraniaceae, Lythraceae, Myrsinaceae, Onagraceae, Orchidaceae, Rubiaceae, Solanaceae, Urticaceae, and Violaceae (1.1%).

According to number of the species families:

Asteraceae 27 (21.4%), *Poaceae* 17 (13.5%), *Fabaceae* 12 (9.5%), *Lamiaceae* 7 (5.6%), *Polygonaceae* and *Rosaceae* 6 (4.8%), *Plantaginaceae* 5 (4.0%), *Apiaceae* and *Brassicaceae* 4 (3.2%), *Geraniaceae*, *Malvaceae*, *Papaveraceae* 3 (2.4%), *Amaranthaceae*, *Boraginaceae*, *Caryophyllaceae*, *Convolvulaceae*, *Ranunculaceae*, *Scrophulariaceae* and *Urticaceae* 2 (1.6%), *Araceae*, *Araliaceae*, *Cyperaceae*, *Dennstaedtiaceae*, *Dipsacaceae*, *Euphorbiaceae*, *Lythraceae*, *Myrsinaceae*, *Onagraceae*, *Orchidaceae*, *Rubiaceae*, *Solanaceae* and *Violaceae* 1 (0.8%), respectively.

In terms of number of species Genuses: *Circium* and *Trifolium* 4; *Sonchus*, *Lamium*, *Poa* and *Rumex* 3; *Chenopodium*, *Matricaria*, *Senecio*, *Sinapis*, *Vicia*, *Stachys*, *Malva*, *Fumaria*, *Plantago*, *Veronica*, *Alopecurus*, *Festuca*, *Lolium* and *Urtica* 2, and other

genus have 1 species, respectively.

Plants were classified according to their status such as 105 least concern plants, 9 rare plants, 9 scarce plants, 4 vulnerable plants and 1 endemic plant and 1 near threatened plant. In terms of life-style/growth habit of the plants determined there were 66 perennial, 42 annual, 6 biennial, 5 annual-biennial, 5 biennial-perennial and 2 annual-biennial-perennial.

Ranking species in terms of purpose and status identified 103 weeds, 64 medicinal, 55 poisonous, 28 invasive, 26 forage crops and 9 ornamental plants. All species were photographed and catalogued during the survey. A sample selection of photographs is shown in Figure 2.

In the study families of *Asteraceae*, *Poaceae*, *Fabaceae*, *Lamiaceae*, *Polygonaceae* and *Rosaceae*, genuses of *Circium*, *Trifolium*, *Sonchus*, *Lamium*, *Poa* and *Rumex* were determined as more dominated in

wild flora of Cirencester. Similar families were emphasized in the South West Region by Anonymous (2010), Rutter (2011), Pilkington (2012) and Anonymous (2013b).

4. CONCLUSION

A survey of wild flora of the urban and peri-urban areas in Cirencester, Gloucestershire, England, was

carried out during the summer of 2013. The survey identified 32 families, 96 genera and 126 species. Weeds (103) were identified as the most abundant in the studied flora. Sixty four species of medicinal plants were identified in the flora with important potential in terms of pharmaceutical and medicinal areas. Twenty six species of forage crops were determined in the flora which has great importance for

Some wild plants in the Cirencester natural flora

Linaria vulgaris

Symphytum uplandicum

Verbascum nigrum

Stachys palustris

Papaver rhoeas

Centaurea nigra

Chrysanthemum segetum

Trifolium pratense

Leucanthemum vulgare

Dipsacus fullonum

Cichorium intybus

Arum maculatum

Onobrychis viciifolia

Senecio jacobaea

Arctium lappa

Figure 2. The photographs of some of the plants in the flora of Cirencester

animal husbandry. However, fifty five poisonous plants identified from this study can be a possible threat to human and animal health.

5. ACKNOWLEDGMENT

The authors would like to acknowledge Ms Sally Rice, biology laboratory technician at the Royal Agricultural University, Cirencester, for her help and contribution to this work.
